Broadly Beneficial Clean-Energy Planning Session 1: Stage-setting and Baseline Data

Broadly Beneficial Clean-Energy Planning is a series of three webinars examining data-backed scenario planning as a tool for structuring stakeholder-centered planning for clean energy policies and programs in cities. Produced and presented by WRI, Greenlink Analytics, and USDN in spring 2020, the series is part of a larger training program which includes provision of data and modeling services from Greenlink for selected cities.

Session 1, ***Stage-Setting and Baseline Data***, introduces scenario planning and the role of baseline data. Watch to learn more about:

- How social equity is central to effective clean-energy planning

- How scenario planning can structure a stakeholder-centered planning process

- What is scenario planning

- How to build a baseline assessment around stakeholder-identified priorities and values
