

Hamburger Hochbahn AG

- Control of processes at six depots
- Disposition of 800 buses (diesel and electric)
- Optimized refuelling – Refuel only when needed
- Project extension with E-DMS and Charge management
- Optimization with Qualicision - Dynamic, flexible and fast

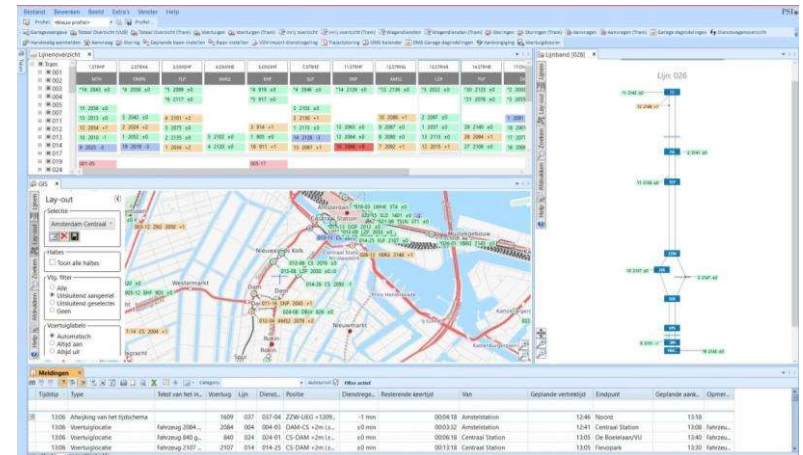

GVB Amsterdam – Largest Dutch urban transport company

- Combined AVL and DMS
- System is operated in a cloud
- Integrated dispatching of buses and trams
- Real-time passenger information (displays and web)
- Automatic track assignment for trams

"I always know where my vehicle is parked and that everything is perfectly clean and well maintained."

Martin Winkler, Bus Driver

A man with glasses and a grey polo shirt is sitting at a desk in an office. He is looking at a computer monitor. The desk has several other monitors. In the background, there is a window with a view of greenery and a bulletin board with various papers and charts.

"The DMS simplifies my day-to-day work and ensures that no passenger has to wait for his/her bus."

Joachim Hansen, Dispatcher

A middle-aged man with short, spiky brown hair and glasses, wearing a dark blue long-sleeved shirt with a "TEREG" logo. He is standing in a workshop or garage, with a red piece of equipment visible in the background. The background is slightly blurred, showing some lights and equipment.

"We refuel and charge buses only on demand, which saves a lot of time."

Franz Becker, Employee Supply

A man with short brown hair and a slight smile, wearing a dark blue long-sleeved work shirt, stands with his arms crossed in a workshop. To his right, two computer monitors are visible. The top monitor displays a software interface with various colored bars and data points, likely a DMS (Digital Maintenance System). The background is a blurred workshop environment with yellow overhead lights.

“Thanks to the DMS, we can quickly react to vehicle malfunctions. Every vehicle is in the workshop only as long as it needs to be.”

Frank Mertens, Workshop Manager
